M. TODD KILPATRICK
Levee Commissioner

November 25, 2014

U S Army Corps of Engineers
Attn: CECW-CE
Lisa Kiefel
441 G Street NW
Washington, DC 2013-1000

Dear Ms. Kiefel:

Proposal from Tulsa/West Tulsa Levee District 12

1. Tulsa/West TULSA Levee District 12, Tulsa County Rehabilitation of TULSA West Tulsa Levee. The Tulsa and West Tulsa Local Protection Project was authorized for construction by the Flood Control Act 1941. The project consists of a system of three earthen levees on the Arkansas River, two located on the left bank and one located on the right bank. The project includes seven pumping plants, four stop-log structures, wing levee, diversion channels and a flood way structure. The levees are designed to protect the Standard Project Flood or the Arkansas River flows or 350,000 cubic feet per second. The levees were constructed by the Corps in phases beginning in 1935. The work was completed in 1945. The levee failed in two places during a 1986 flood event on the Arkansas River. The failures were due to damaged pipes which ran through the levees. In 1989, a Corps of Engineers, under then current policies, determined that rehabilitation of the levees was a non-federal responsibility. However, the U S Congress directed the Corp to repair the levee through The Energy and Water Development Act of 1991 and providing funding to repair the levees and restore them to a safe condition. The legislation directed that the non-federal share in the cost of the repairs be in accordance with Public Law 99-622.

The twenty years since the levees have had any major repairs. The age of the levees and the use of less than optimal materials in original construction (due to shortages during World War II) and associated challenges of maintaining such the levees do not meet current community nor engineering standards for a safe levee. The pump stations and equipment were designed and built in World War II era and have not been replaced since that era.

2. Modification to Project -- Rehabilitation of System – Redesign

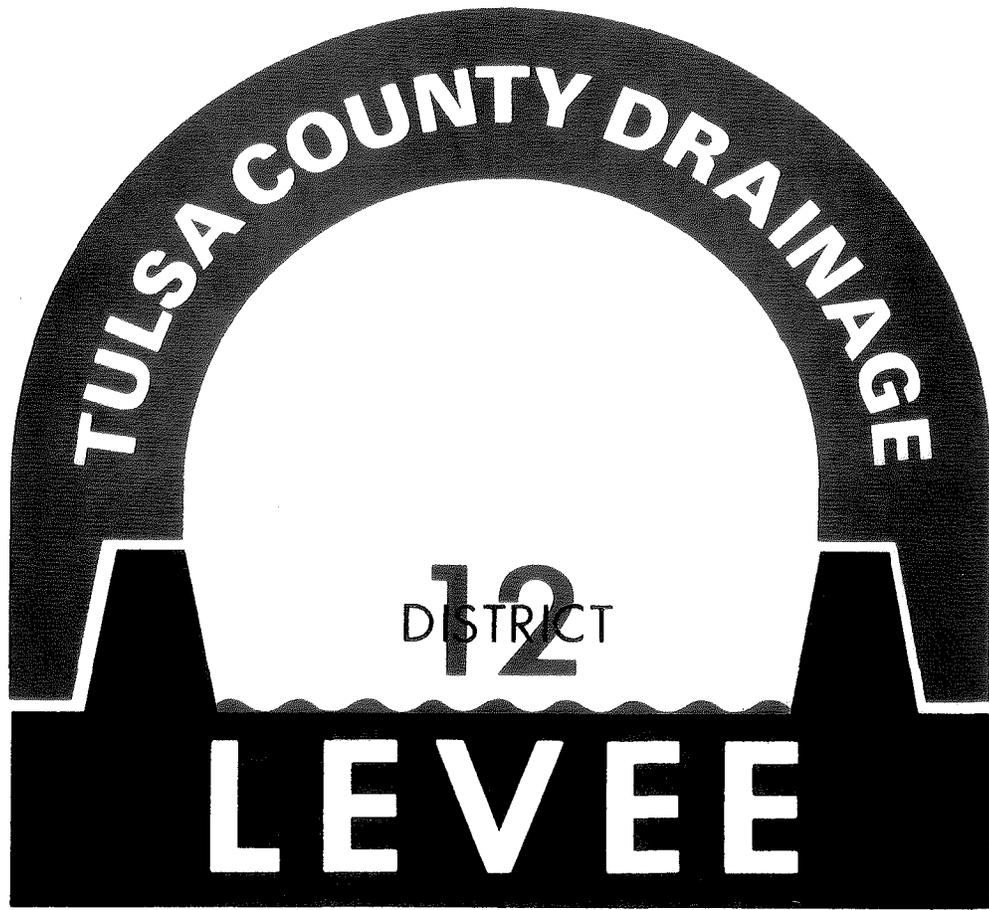

3. To bring the 20 miles of Levee System up to Safety Standards as well as correct Design Deficiencies.
4. \$34 million. See attached "Cost Estimate".
5. Approximately \$2 billion in infrastructure, 20,000+ citizens, benefits include protection of two major petroleum refineries, both of which provide gasoline to a large portion of the mid-continental United States. Other industries protected include a steel mill, and chemical production and distribution facilities, all of which would benefit from reduced flood risk associated with levee failure. The project would also provide protection to established residential areas, which is populated by low income and elderly populations. These populations are especially vulnerable to life safety considerations associated with potential flooding due to levee failure. With the type of material stored and produced in the protected areas, flood risk includes those associated with environmental contamination. There are also major vehicular and rail traffic ways that transect the protected area and are at risk. Flooding risks not only affect the community economic, environmental and social wellbeing but also have implications for the regional and the national economy.
6. Yes- Tulsa County, City of Sand Springs, City of Tulsa, Levee District, Holly Refineries, Local Businesses, Federal Representatives, as well as local residents. See attached "Local Support".
7. Yes
8. See included ""Letters of Support" from local leaders

Sincerely,

A handwritten signature in black ink, appearing to read "M. Todd Kilpatrick". The signature is fluid and cursive, with the first letter of each word being capitalized and prominent.

M. Todd Kilpatrick
Commissioner

2014

COST ESTIMATE

Tulsa-West Tulsa Levee System
Pump Station replacement/upgrade

Station #1:

These items are included in the following estimate: (2) AMACAN Water Transfer Pumps to attach to existing discharge; (2) KSB KRT Submersible sewage pumps with 6" discharge with riser piping to connect to existing discharge; (1) Quadplex Control Panel; Local SCADA System with tower and transmitter to connect with Master SCADA System; Demo and Installation

Station #2:

These items are included in the following estimate: (2) AMACAN Water Transfer Pumps to attach to existing discharge; (1) KSB KRT Submersible sewage pumps with 4" discharge with riser piping to connect to existing discharge; (1) Triplex Control Panel; Local SCADA System with tower and transmitter to connect with Master SCADA System; Demo and Installation

Station #3:

These items are included in the following estimate: (2) AMACAN Water Transfer Pumps to attach to existing discharge; (1) Duplex Control Panel; Local SCADA System with tower and transmitter to connect with Master SCADA System; Demo and Installation

Station #4:

These items are included in the following estimate: (2) AMACAN Water Transfer Pumps to attach to existing discharge; (1) Duplex Control Panel; Local SCADA System with tower and transmitter to connect with Master SCADA System; Demo and Installation

Station #5:

These items are included in the following estimate: (2) AMACAN Water Transfer Pumps to attach to existing discharge; (1) Duplex Control Panel; Local SCADA System with tower and transmitter to connect with Master SCADA System; Demo and Installation

Station #6:

These items are included in the following estimate: (3) AMACAN Water Transfer Pumps to attach to existing discharge; (1) KSB KRT Submersible sewage pump with 8" discharge with riser piping to connect to existing discharge; (1) Quadplex Control Panel; Local SCADA System with tower and transmitter to connect with Master SCADA System; Demo and Installation

Station #7:

These items are included in the following estimate: (3) AMACAN Water Transfer Pumps to attach to existing discharge; (1) KSB KRT Submersible sewage pump with 8" discharge with riser piping to connect

to existing discharge; (1) Quadplex Control Panel; Local SCADA System with tower and transmitter to connect with Master SCADA System; Demo and Installation

Master SCADA System:

These items are included in the following estimate: (1) Receiving Tower; Programming; Installation; Master Control Station with Desktop Computer.

Diesel Driven Generator Packs:

Pump station replacement/upgrade information provided by Southwest Fluid Systems, LLC

M. Todd Kilpatrick
Levee Commissioner
1202 E. Pecan Street
Sand Springs, OK 74063-8527

Dear Commissioner Kilpatrick,

I write to you today to express my continued support of Tulsa's efforts to rehabilitate the ageing levee system in the Tulsa area.

Built in the 1940s, the infrastructure that comprises the levee system is well past its useful life. With clay pipes and antiquated equipment, the areas of Sand Springs and west Tulsa are insufficiently protected in the event of a major flood. The approximately 20 miles of levees protect an estimated \$2.2 billion of infrastructure, including homes and industries, and if a breach were to occur it would endanger lives and cause devastating effects to the local and regional economy.

I will continue to work with you and your local and federal partners to find a solution to rehabilitate the levee system, ensuring the safety of those who rely on the levees to protect their property, jobs, and lives.

Sincerely,

James M. Inhofe

M. Todd Kilpatrick
Levee Commissioner
1202 E. Pecan Street
Sand Springs, OK 74063-8527

Dear Commissioner Kilpatrick,

I write to you to express my support for the efforts of Tulsa County to rehabilitate the Tulsa Levee System.

The current infrastructure that encompasses the twenty miles of levees in the Tulsa system was constructed around the time of World War II and the levees are woefully outdated. In fact, they are now in the top 5 percent of most high risk levees in the country. These levees protect billions of dollars worth of infrastructure, including homes, businesses, and energy production. The potential loss of life and destruction of property in the event of a breach would be devastating.

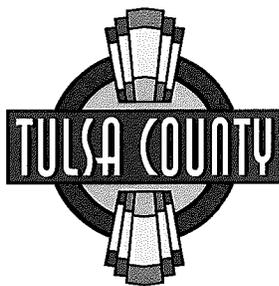

There have already been efforts made to secure partnerships with the federal government, as seen by Tulsa's reinstatement into the Army Corps of Engineers' System-Wide Improvement Framework Program in 2012. Now solutions must be sought to prevent dangerous and destructive events from occurring.

I look forward to working with you and your partners at all levels of government in order to find a way to properly rehabilitate the levee system and safeguard lives and property.

Sincerely,

Jim Bridenstine
Member of Congress

Board of County Commissioners

KAREN KEITH
DISTRICT 2

November 24, 2014

To Whom It May Concern:

West Tulsa County is home to a levee system that no longer offers protection for some 2 billion dollars of infrastructure that includes The Holly refinery with a crude oil capacity of 125,000 barrels a day ... and serves markets throughout the Mid-Continent region of the United States. This refinery's capacity and potential impact in loss of production as well as devastating environmental impacts in a high water event, justifies a federal interest. You add to that the other major industries protected by the levee and our levee system rises to the top in priority.

Magellan's West Tulsa petroleum distribution terminal provides an important role in storing and distributing various grades of gasoline and diesel fuel in Tulsa and surrounding areas. The facility, which receives refined petroleum products via pipeline from Oklahoma and Houston area refineries, has a total storage capacity of 4.1 million barrels.

Aaon Heating and Cooling is a major employer with 1300 workers. The Sand Springs water treatment plant and most of its industrial base would be impacted.

Hundreds of small businesses and homeowners must also be protected. This levee system is vital for economic stability in our region and the Midwest.

Because of the federal interest, it is my hope that federal funding will be found to help rebuild this system. I would also ask that we build the levees to a higher threshold than is minimally required. In doing so I would like for us to make the levees accessible to both pedestrian and bicycle traffic. Amsterdam is famous for their levees and they are a vital part of their bicycle transportation system.

Our levee district, regional FEMA officials and our local staff at the Corps of Engineers have all been working together and have an interest in seeing this project to completion.

I ask for your support and assistance in the rehabilitation of the Tulsa\West Tulsa Levee.

Sincerely,

Karen Keith
County Commissioner
District 2

September 19, 2014

M. Todd Kilpatrick
Levee Commissioner
Levee District 12
1202 E. Pecan
Sand Springs, OK 74063

Mr. Kilpatrick,

Holly Refining and Marketing - Tulsa LLC would like to express its support for the Tulsa Levee District 12 rehabilitation work, so that the district meets the new Federal Safety Standards. The Tulsa Refinery is located in Tulsa, Oklahoma and has a crude oil capacity of 125,000 barrels per day. The Tulsa Refinery, which sits adjacent to Cushing, Oklahoma, the largest crude oil trading hub in the U.S., processes predominately sweet crude oil but also has the capability to process sour crude oils. Tulsa refined products are marketed primarily throughout the Mid-Continent region of the United States. The Tulsa Refinery also manufactures lubricants and specialty waxes, including lubricating oils (base, blended and process oils), waxes, horticultural oils and asphalt modifiers.

The two facilities reside in West Tulsa on the banks of the Arkansas River. We count on the levee system to reduce the flood potential for our facilities and the local community. Having the levee up to Federal Standards will help continue this in the future.

Respectfully,

Andrew Haar
Environmental Manager
Holly Refining and Marketing - Tulsa LLC
Tulsa Refinery

Mayor Dewey F. Bartlett, Jr.
OFFICE OF THE MAYOR

October 31, 2013

Commissioner Todd Kilpatrick
Levee District 12
1202 E. Pecan
Sand Springs, OK 74063

Re: Levee District 12

Dear Commissioner Kilpatrick:

The City of Tulsa has identified \$3,400,000 in the upcoming Capital Program, Improve Our Tulsa, to be voted on this November. This funding has been identified to study the levee deficiencies and move toward certification of the levees which protect properties within the city of Tulsa.

Assuming passage of the above mentioned Capital Program proposal, the City of Tulsa, Engineering Services Department will create a Capital Improvement Project for additional repairs as identified in the levee study mentioned above. We anticipate this will be an estimated cost in the \$8 - \$12 million range. We are committed to partner with the Levee District to maintain the levee system which protects properties within our city and will enjoy working with you to identify additional sources of funding.

Best regards,

Dewey F. Bartlett, Jr.
Mayor

DFB:cc

Memorandum of Understanding

To: City of Sand Springs
From: Commissioner M. Todd Kilpatrick
cc: City of Tulsa, Tulsa County
Date: June 12, 2013
Re: Rectification of District 12 Levees

In order to ensure Levee District 12 is in compliance with the improved standards of the U.S. Army Corps. Of Engineers (USACE) and Federal Emergency Management Agency (FEMA) accreditation requirements, extensive rectification is necessary.

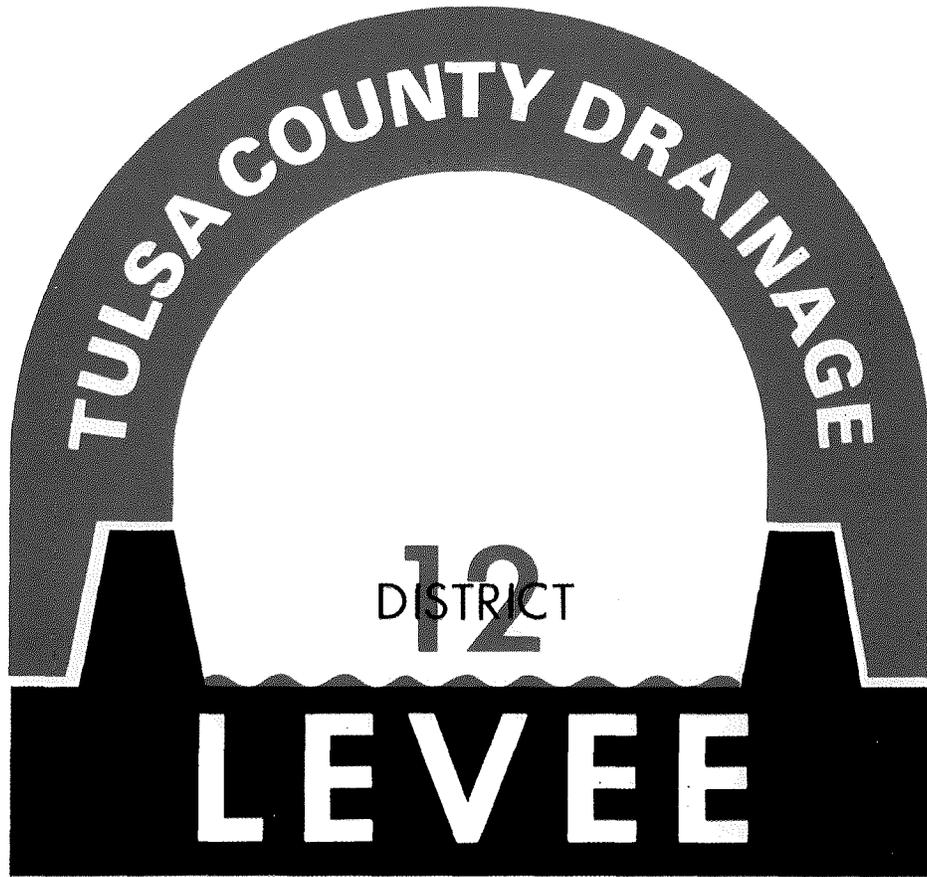

FEMA accreditation for the levee district will expire in August 2013. The loss of the accreditation will require residents and businesses in the Levee district to bear the financial burden of providing flood insurance for their properties. Acceptance of a Provisionally Accredited Levee Designation Agreement (PAL), which will ensure a two year accreditation extension, will be sought. The ability to demonstrate adequate funding to ensure the rectification can be completed is an integral factor. Resultant of the strong commitment to the restoration of the Tulsa/West Tulsa Levee systems to USACE standards, the levee system was granted temporary rehabilitation eligibility until June 2014 to implement a System-Wide Improvement Framework (SWIF) Plan.

In order to offset the fiscal impact of the necessary repairs and further the scope of service to the residents and businesses served by the District 12 Levee system, every opportunity to obtain adequate funding for the repairs is crucial.

The City of Sand Springs understands the necessity and critical circumstances surrounding this endeavor, and fully supports exploring every avenue and making every effort to secure funding for the rectification work, thereby maintaining our commitment to ensuring the safety of residents, businesses, and property located within Tulsa, Sand Springs, and Tulsa County.

Rocky Rogers, City Manager
Sand Springs, OK

M. Todd Kilpatrick, Commissioner
Drainage District 12

LOCAL SUPPORT

We the local residents of the Tulsa West Tulsa Levee District 12 request funding to bring the Levee up to the New Safety Standards set by FEMA and the U. S. Corp of Engineers.
