November 24, 2014

Honorable Jo-Ellen Darcy
Assistant Secretary of the Army for Civil Works
108 Army
The Pentagon
Washington, DC 20310-0108

Dear Secretary Darcy:

As the sponsor of the Brazos Island Harbor (BIH) Project, we formally request that the BIH Project be included in the Corps Annual Report to Congress as prescribed by Title VII, Section 7001 (a)(1) of the Water Resources Reform Development Act of 2014.

Congress received the signed BIH Chief’s Report, accompanied by the report of the District and Division Engineer, in October of 2014. This report is an interim response to a resolution of the Committee on Public Works, U.S. House of Representatives, dated May 5, 1966. The Committee authorized USACE to conduct a study of BIH, Texas, to determine whether the project should be modified in any way, particularly with a view to widening and deepening the existing channels.

Additionally, the Emergency Supplemental Appropriations Act for Defense, the Global War on Terror, and Tsunami Relief, 2005 (P.L. 109-13), Section 6009, "Offshore Oil and Gas Fabrication Ports", provided that in determining the economic justification for navigation projects involving offshore oil and gas fabrication ports, the Secretary is directed to measure and include in the National Economic Development (NED) calculation the value of future energy exploration and production fabrication contracts and transportation cost savings that would result from larger navigation channels. The process has been a long time in coming but has yielded a project that has a BCR of 6.4 to 1.

Attached for your review is supporting information -- should you need it -- to include this project in the Corps Annual Report to Congress.

Sincerely,

Eduardo A. Campirano
Port Director and CEO

SUBJECT: Brazos Island Harbor Channel Improvement Project, Texas

THE SECRETARY OF THE ARMY

1. I submit for transmission to Congress my report on navigation improvements for the Brazos Island Harbor (B IH) Channel Improvement Project, Texas. It is accompanied by the report of the district and division engineers. This report is an interim response to a resolution of the Committee on Public Works, U.S. House of Representatives, dated May 5, 1966. The committee authorized USACE to conduct a study of BIH, Texas, to determine whether the project should be modified in any way, particularly with a view to widening and deepening the existing channels. Additionally, the Emergency Supplemental Appropriations Act for Defense, the Global War on Terror, and Tsunami Relief, 2005 (P.L. 109-13), Section 6009, “Offshore Oil and Gas Fabrication Ports”, provided that in determining the economic justification for navigation projects involving offshore oil and gas fabrication ports, the Secretary is directed to measure and include in the National Economic Development (NED) calculation the value of future energy exploration and production fabrication contracts and transportation cost savings that would result from larger navigation channels. Preconstruction engineering and design activities for this proposed project, if funded, would be continued under the 1966 authority. The existing BIH 42-foot navigation project was authorized by the Water Resources Development Act (WRDA) of 1986 (P.L. 99-662) and construction was completed in 1996.

2. The reporting officers recommend authorizing a plan that will contribute significantly to the economic efficiency of commercial navigation in the region. The recommended plan includes channel deepening along a majority of the channel length with no widening. Since the recommended plan would not have significant adverse effects, no compensatory mitigation measures (beyond minimization and avoidance) would be required. The feasibility report did not identify a NED Plan; however, the analysis indicated that the net excess benefits were still increasing with deeper channel dimensions. The recommended channel deepening plan is the deepest plan that the non-federal sponsor would support due to financial constraints. Therefore, the recommended plan is a Categorical Exemption to the NED Plan. All project features are located in the State of Texas.

3. The Brownsville Navigation District, acting as the financial representative for the Port of Brownsville, is the non-federal cost sharing sponsor for all features. Based on October 2014 price levels, the estimated total project cost of the plan is $204,587,000 for deep-draft navigation.
DAEN
SUBJECT: Brazos Island Harbor Channel Improvement Project, Texas

In addition, there are non-federal associated costs of $47,257,000 for the dredging of berthing areas to include construction of Placement Area (PA) capacity associated with third party use and development of other local service facilities and federal associated costs of $108,000 for aids to navigation. Total project implementation costs including the associated costs are $251,952,000. The federal share of the total project implementation cost would be about $116,116,000 and the non-federal share would be about $135,836,000.

4. The reporting officers recommend a plan to modify the existing BIH Channel. No widening of the BIH Channel is proposed. The recommended plan consists of the following improvements:

a. The entrance and jetty channels from Station -17+000 to 0+000 would be deepened from 44 feet to a depth of 54 feet Mean Lower Low Water (MLLW). This provides an additional 2 feet of depth, beyond the interior channel depth, to allow for the effects of vessel pitch, roll, heave, and yaw occurring as a result of strong currents, waves, and wind.

b. From Station 0+000 to 84+200, the channel would be deepened from 42 feet to a depth of 52 feet MLLW.

c. From Station 84+200 to 86+000, the existing channel depth of 42 feet MLLW would be maintained since there is no forecast change in the design drafts of vessels using this portion of the channel in the future.

d. The channel would continue to be maintained at the existing depth of 36 feet MLLW from Station 86+000 to the end of the Turning Basin, as ships will have been light-loaded or unloaded before entering the basin.

5. Dredged material placement for this project would be provided in accordance with the Dredged Material Management Plan (DMMP) developed during the study that identified the least cost base plan for placement of dredged material. Deepening the BIH Channel would generate approximately 14.1 million cubic yards of new work material and 61.7 million cubic yards of maintenance material over the 50-year period of economic evaluation. New work material will be placed in the new work Ocean Dredged Material Disposal Sites (ODMDS) and the existing PAs. Maintenance material from the entrance and jetty channels and the first 11,000 feet of the main channel would be placed offshore in a nearshore feeder berm. If for some reason the feeder berm could not be used, this reach of maintenance material could be placed in the maintenance ODMDS. Material from the inland reaches would be placed in existing confined, upland PAs adjacent to each reach. No horizontal expansion of existing upland sites would be required.

6. The estimated total project first cost of constructing the project is $204,587,000 based on October 2014 price levels, which includes $204,582,000 for channel modification and dredged
material placement and $5,000 for the non-federal sponsor’s provision of lands for the project. There are no costs for fish and wildlife mitigation expected for this project and no cultural resource mitigation costs are expected at this time. Additionally, there are no utility relocations expected with this project. This estimated first cost includes a federal cost of $116,008,000 and a non-federal cost of $88,579,000, as apportioned in accordance with the cost sharing provisions of Section 101 of WRDA 1986, as amended. This results in a blended cost sharing as follows:

a. The costs for the deepening of the channel from 42 to 45 feet will be shared at the rate of 75 percent by the government and 25 percent by the non-federal sponsor. Accordingly, the federal and non-federal shares of the estimated $54,872,000 cost in this zone will be approximately $41,150,000 and $13,722,000, respectively.

b. The costs for the deepening the channel from 45 to 52 feet will be shared at the rate of 50 percent by the government and 50 percent by the non-federal sponsor. Accordingly, the federal and non-federal shares of the estimated $149,715,000 cost in this zone will be approximately $74,858,000 and $74,858,000, respectively.

c. Additional 10 Percent Payment. In addition to payment by the non-federal sponsor for its share of the total first costs of construction of the general navigation features (GNF) as estimated and described in sub-paragraphs 6(a) and 6(b) above, the non-federal sponsor must pay an additional 10 percent of the cost of the GNF of the project in cash over a period not to exceed 30 years, with interest. The additional 10 percent payment without interest is estimated to be $20,459,000. There is no crediting of the value of lands, easements, rights-of-way, and relocations (LERRs) provided by the non-federal sponsor because this value has already been credited with previous project construction.

d. Operations and Maintenance (O&M) Costs. The additional annual cost of O&M for this recommended plan is estimated at $2,971,000. In accordance with Section 101(b) of WRDA 1986, as modified by Section 2102(b) of the Water Resources Reform and Development Act (WRRDA) of 2014 (P.L. 113-121), the non-federal sponsor will be responsible for an amount equal to 50 percent of the excess of the cost of the O&M of the project over the cost which would be incurred for O&M of the project if the project had a depth of 50 feet. Dike raising for the maintenance will be cost shared as O&M costs, with the costs for dike raising associated with deepening the channel from 42 to 50 feet being a 100 percent government expense and the costs associated with deepening from 50 to 52 feet being shared at the rate of 50 percent by the government and 50 percent by the non-federal sponsor. Costs for dike raising for dredging of berthing areas and development of other local service facilities is 100 percent a non-federal sponsor responsibility. The federal share for the annual cost attributable to O&M is $2,674,000 and the non-federal sponsor is responsible for $297,000.

e. Associated Costs. Estimated total project associated costs of $47,365,000 include non-federal costs of $47,257,000 associated with dredging of berthing areas to include construction
DAEN
SUBJECT: Brazos Island Harbor Channel Improvement Project, Texas

of PA capacity associated with third party use and development of other local service facilities and associated federal costs of $108,000 for navigation aids (a U.S. Coast Guard expense).

f. Section 902 Calculation. For the purpose of calculating the maximum cost of the project pursuant to Section 902 of WRDA 1986, as amended, the total estimated project first cost is $204,587,000 which consists of an estimated federal share of $116,008,000 and an estimated non-federal share of $88,579,000. As explained in paragraph 6, above, the total estimated first cost for this purpose includes the estimates for GNF construction costs, any value of LERRs provided under Section 101(a)(3) of WRDA 1986, as amended.

7. Based on October 2014 price levels, a discount rate of 3.375 percent, and a 50-year period of economic analysis, the project average annual benefits and costs for the BIH improvements are estimated at $20,599,000 and $13,896,000, respectively, with a resulting net benefit of $6,703,000 and a benefit-to-cost ratio (BCR) of 1.5 to 1. Using the allocable benefits described in the Emergency Supplemental Appropriations Act for Defense, the Global War on Terror, and Tsunami Relief, 2005 (P.L. 109-13), Section 6009, “Offshore Oil and Gas Fabrication Ports”, resulted in project annual benefits of $90,871,000, net benefits of $76,975,000 and a BCR of 6.5 to 1.

8. Risk and uncertainty were evaluated for economic benefits, costs, and sea level rise. Economic sensitivity analyses were conducted to determine the sensitivity of projected benefits to changes in key assumptions, such as commodity tonnage, fleet distribution, and other various growth rates. In accordance with the USACE Engineering Circular 1165-2-212, Sea-Level Change Consideration for Civil Works Programs, the study details the analysis performed to identify potential sea level rise rates. Low, intermediate, and high projections of relative sea level rise (RSLR) at the end of the 50-year period of analysis are estimated to be 0.63 feet, 1.06 feet, and 2.40 feet, respectively. The historic average rate for the project area is about 1.26 feet per 100 years. In general, RSLR (low, intermediate, and high) will not affect the function of the project alternatives. Upland PAs would be armored to withstand the effects of rising sea levels and the cost of this armoring is included in the total project cost estimate. Minor impacts in the project vicinity would likely occur due to RSLR, but not as a consequence of the proposed project.

9. In accordance with the USACE Engineering Circular on review of decision documents, all technical, engineering, and scientific work underwent an open, dynamic, and vigorous review process to ensure technical quality. This included an Agency Technical Review (ATR), an Independent External Peer Review (IEPR), and a USACE Headquarters policy and legal review. All concerns of the ATR have been addressed and incorporated into the final report. The IEPR was completed by Battelle Memorial Institute. A total of 13 comments were documented. The comments were related to plan formulation, vessel fleet analysis, benefits, dredging and sedimentation, risk and uncertainty, and the cumulative impacts of changes in air quality. In response, sections in the main report and EIS were expanded to include additional information.
SUBJECT: Brazos Island Harbor Channel Improvement Project, Texas

10. Washington level review indicates that the project recommended by the reporting officers is technically sound, environmentally and socially acceptable, and economically justified. The plan complies with all essential elements of the 1983 U.S. Water Resources Council’s Economic and Environmental Principles and Guidelines for Water and Land Related Resources Implementation Studies and complies with other administrative and legislative policies and guidelines. The views of interested parties, including federal, state, and local agencies were considered. There were no comments from public review of the draft integrated report. During state and agency review, a letter was received from the Texas Commission on Environmental Quality, which did not include concerns about the project.

11. I concur in the findings, conclusions, and recommendations of the reporting officers. Accordingly, I recommend that navigation improvements for the BIH be authorized in accordance with the reporting officers’ recommended plan at an estimated cost of $204,587,000 with such modifications as in the discretion of the Chief of Engineers may be advisable. My recommendation is subject to cost sharing, financing, and other applicable requirements of federal and state laws and policies, including Section 101 of WRDA 1986, as amended. The non-federal sponsor would provide the non-federal cost share and all LERRs. Further the non-federal sponsor would be responsible for the non-federal cost share of the operation and maintenance, as described above. This recommendation is subject to the non-federal sponsor agreeing to comply with all applicable federal laws and policies, including but not limited to:

    a. Provide 10 percent of the total cost of construction of the GNFs attributable to dredging to a depth not in excess of 20 feet; plus 25 percent of the total cost of construction of the GNFs attributable to dredging to a depth in excess of 20 feet but not in excess of 45 feet; plus 50 percent of the total cost of construction of the GNFs attributable to dredging to a depth in excess of 45 feet as further specified below:

        (1) Provide 50 percent of design costs allocated by the government to commercial navigation in accordance with the terms of a design agreement entered into prior to commencement of design work for the project;

        (2) Provide, during construction, any additional funds necessary to make its total contribution for commercial navigation equal to 10 percent of the total cost of construction of the GNFs attributable to dredging to a depth not in excess of 20 feet; plus 25 percent of the total cost of construction of the GNFs attributable to dredging to a depth in excess of 20 feet but not in excess of 45 feet; plus 50 percent of the total cost of construction of the GNFs attributable to dredging to a depth in excess of 45 feet;

    b. Provide all LERRs, including those necessary for the borrowing of material and placement of dredged or excavated material, and perform or assure the performance of all relocations, including utility relocations, all as determined by the government to be necessary for the construction or operation and maintenance of the GNFs;
c. Pay with interest, over a period not to exceed 30 years following completion of the period of construction of the GNFs, an additional amount equal to 10 percent of the total cost of construction of the GNFs less the amount of credit afforded by the government for the value of the LERRs, including utility relocations, provided by the non-federal sponsor for the GNFs. If the amount of credit afforded by the government for the value of LERRs, including utility relocations, provided by the sponsor equals or exceeds 10 percent of the total cost of construction of the GNF, the sponsor shall not be required to make any contribution under this paragraph, nor shall it be entitled to any refund for the value of LERRs, including utility relocations, in excess of 10 percent of the total costs of construction of the GNFs.

d. Provide, operate, and maintain, at no cost to the government, the local service facilities in a manner compatible with the project’s authorized purposes and in accordance with applicable federal and state laws and regulations and any specific directions prescribed by the federal government;

e. Provide 50 percent of the excess cost of O&M of the project over that cost, which the federal government determines would be incurred for O&M if the project had a depth of 50 feet;

f. Give the federal government a right to enter, at reasonable times and in a reasonable manner, upon property that the non-federal sponsor owns or controls for access to the project for the purpose of completing, inspecting, operating and maintaining the GNFs;

g. Hold and save the U.S. free from all damages arising from the construction or O&M of the project, any betterments, and the local service facilities, except for damages due to the fault or negligence of the U.S. or its contractors;

h. Keep and maintain books, records, documents, and other evidence pertaining to costs and expenses incurred pursuant to the project, for a minimum of 3 years after completion of the accounting for which such books, records, documents, and other evidence is required, to the extent and in such detail as will properly reflect total cost of construction of the project, and in accordance with the standards for financial management systems set forth in the Uniform Administrative Requirements for Grants and Cooperative Agreements to state and local governments at 32 CFR, Section 33.20;

i. Perform, or ensure performance of, any investigations for hazardous substances as are determined necessary to identify the existence and extent of any hazardous substances regulated under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), 42 USC 9601–9675, that may exist in, on, or under LERRs that the government determines to be necessary for the construction or O&M of the GNFs. However, for LERRs that the government determines to be subject to the navigation servitude, only the government shall perform such investigation unless the federal government provides the non-federal sponsor with
prior specific written direction, in which case the non-federal sponsor shall perform such investigations in accordance with such written direction;

j. Assume complete financial responsibility, as between the federal government and the sponsor, for all necessary cleanup and response costs of any hazardous substances regulated under CERCLA that are located in, on, or under LERRs that the federal government determines to be necessary for the construction or operation and maintenance of the project;

k. To the maximum extent practicable, perform its obligations in a manner that will not cause liability to arise under CERCLA;

l. Comply with Section 221 of the Flood Control Act of 1970, as amended (42 USC 1962d-5b), and Section 101(e) of the WRDA 1986, as amended (33 USC 2211(e)), which provides that the Secretary of the Army shall not commence the construction of any water resources project or separable element thereof, until the non-federal sponsor has entered into a written agreement to furnish its required cooperation for the project or separable element;

m. Comply with the applicable provisions of the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970, as amended (42 USC 4601-4655), and the Uniform Regulations contained in 49 CFR 24, in acquiring lands, easements, and rights-of-way, necessary for construction, O&M of the project including those necessary for relocations, the borrowing of material, or the placement of dredged or excavated material; and inform all affected persons of applicable benefits, policies, and procedures in connection with said act;

n. Comply with all applicable federal and state laws and regulations, including, but not limited to, Section 601 of the Civil Rights Act of 1964 (42 USC 2000d), and Department of Defense Directive 5500.11 issued pursuant thereto, as well as Army Regulation 600-7, entitled "Nondiscrimination on the Basis of Handicap in Programs and Activities Assisted or Conducted by the Department of the Army"; and all applicable federal labor standards requirements including, but not limited to, 40 USC 3141-3148 and 40 USC 3701-3708 (revising, codifying and enacting without substantive changes the provision of the Davis-Bacon Act (formerly 40 USC 276a et seq.), the Contract Work Hours and Safety Standards Act (formerly 40 USC 327 et seq.), and the Copeland Anti-Kickback Act (formerly 40 USC 276c);

o. Provide the non-federal share of that portion of the costs of mitigation and data recovery activities associated with historic preservation that are in excess of 1 percent of the total amount authorized to be appropriated for the project; and

p. Not use funds from other federal programs throughout, including any non-federal contribution required as a matching share, therefore, to meet any of the sponsor's obligations for the project costs unless the federal agency providing the federal portion of such funds verifies in writing that such funds are authorized to be used to carry out the project.
12. The recommendation contained herein reflects the information available at this time and current departmental policies governing formulation of individual projects. It does not reflect program and budgeting priorities inherent in the formulation of a national civil works construction program or the perspective of higher review levels within the executive branch. Consequently, the recommendation may be modified before it is transmitted to Congress as a proposal for authorization and implementation funding. However, prior to transmittal to Congress, the State of Texas, the Brownsville Navigation District, interested federal agencies, and other parties will be advised of any significant modifications and will be afforded an opportunity to comment further.

### TURNING BASIN/EXTENSION
- **Width:** 325 to 1200 feet wide
- **Depth:** 42 to 36 feet
- **Length:** 1.9 miles

### MAIN CHANNEL
- **Width:** 250 feet
- **Depth:** 42 feet
- **Length:** 15.1 miles

### ENTRANCE & JETTY CHANNEL
- **Width:** 300 feet
- **Depth:** 44 feet
- **Length:** 2.4 miles
### PROBLEMS
- Current channel dimensions result in inefficient navigational practices
- Limited ability for oil drilling rig fabrication, maintenance, and repair due to current channel dimensions

### OPPORTUNITIES
- Increasing navigational efficiency of deep-draft vessels
- Increasing accommodation of offshore rigs for maintenance, repair, and fabrication of new rigs

<table>
<thead>
<tr>
<th>Existing Conditions</th>
<th>Future Without-Project</th>
<th>Plan Formulation</th>
<th>Recommended Plan</th>
<th>Compliance</th>
<th>Summary</th>
</tr>
</thead>
</table>

#### THRUSTER REMOVAL/REATACHMENT
- Offshore removal/reattachment would cost up to $15 million per rig
- Up to 8 thrusters per rig
- Requires a week on average to remove/reattach thrusters per rig
Existing Conditions | Future-Without-Project | Plan Formulation | Recommended Plan | Compliance | Summary
---|---|---|---|---|---

**Future Without-Project Conditions**

- As vessels increase in draft, restrictive depth would prevent vessels from entering with full loads or prevent larger vessels and/or rigs from even using the waterway
- Semi-submersible rigs will need to remove thrusters offshore to enter channel
- Maintenance dredging performed as in past
- Armoring may be needed to protect PAs near Brazos Santiago Pass due to relative sea-level rise

**OBJECTIVE**

- Increase navigational efficiency of cargo vessels and offshore rigs using the channel during the 50-year period of analysis

**CONSTRAINTS**

- Minimize impacts to designated critical habitat for threatened and endangered species in the study area
- Minimize impacts to threatened and endangered species in the study area
- Minimize impacts to cultural resources listed on or eligible for the National Register of Historic Places (defined as historic properties)
- Develop alternatives within Coastal Barrier Resources Act (CBRA) guidelines, which prohibit new Federal expenditures or financial assistance within any CBRA unit (with the exception of improvements to existing navigation channels, disposal areas, and related improvements)
- Limit channel traffic to single lane/one way only
**MEASURES**

- **No-Action**
- **Non-Structural:**
  - Use of another port
  - Alternative modes of commodity transport
- **Structural**
  - Deepening and/or widening of channel
  - Relocation of the turning basin
  - Widen using shelves for rig movements

CATEGORICAL EXEMPTION

- Based on the sponsor's financial constraint due to limited resources
- Per ER 1105-2-100, E-3.b(5), net benefits are increasing as the constraint is reached
- Additional deepening beyond 52 feet was not evaluated so the NED plan could not be identified

### POLICY REVIEW COMPLIANCE

- **Significant HQ Comments**
  - Future without-project condition
    - Operating practice of semi-submersibles
    - Calculation of costs for thruster removal
  - Incremental justification of depth by reach required
  - Categorical exemption addressed in report
  - Characterizing environmental effects in report
- Report revised to include all requested additions
- Comments resolved

### AGENCY TECHNICAL REVIEW

**SIGNIFICANT COMMENT: ECONOMIC ANALYSIS OF RIGS**

**CONCERN:**

- What is the percent of benefits from rigs?
- Is there any uncertainty to the rig fleet behavior?
- Rig benefit could be a large portion of benefits, where any risk and uncertainty could change the outcome.

**RESOLUTION:**

- A sensitivity analysis regarding the assumption of rig behavior was included. Concern Resolved.
- All 13 ATR comments were resolved.
INDEPENDENT EXTERNAL PEER REVIEW
(13 Total IEPR Comments Received; 2 Comments were not Adopted)

COMMENT: Mexican Trade-Related Benefits

CONCERN: The benefits may be overestimated because they include pass-through commodities whose consumer reside in Mexico rather than the United States.

RESOLUTION: Not adopted. The Federal interest in national economic development (NED) includes a navigation provision to support cost-efficient trade between the U.S. and the rest of the world. Furthermore, commerce between the U.S., Mexico and Canada is fostered by the NAFTA and contributes to the NED and the U.S.

---

COMMENT: Channel Width Justification

CONCERN: The rationale for recommending a 52-foot-deep channel for the TSP wider than 250 feet above station 64+000 has not been documented, and the difference in project costs for deepening the channel areas beyond 250 feet has not been provided.

RESOLUTION: Not adopted because not required to justify existing project features, especially when added for safety reasons, which is the case for these channel widths.
## PUBLIC INVOLVEMENT

- Scoping meetings conducted
- DIFR-EA published December 6, 2013 for a 30-day public review period
- Notice of Availability (~250) sent to local media, neighborhood and business organizations, local, state, and Federal governments/agencies, environmental organizations and recognized Indian tribes
- DIFR-EA and supporting technical reports posted on Galveston District website

### Public and Agency Comments
- No controversial issues or concerns
- All comments were supportive in nature and required no changes to the report

---

## ENVIRONMENTAL OPERATING PRINCIPLES

- Foster Sustainability as a Way of Life
  - Nearshore feeder berm for maintenance material routinely replenishes sediment in the littoral system
- Proactively Consider Environmental Consequences
  - Use of existing placement area (PA) footprints; important habitat shielded by a PA levee extension
- Create Mutually Supporting Solutions
  - Incorporates recommendations/requirements from USFWS & NMFS to avoid/minimize impacts to threatened & endangered species
- Accept Responsibility and Accountability
  - Fully complies with legal and policy requirements to consider the impact on the human & natural environment
- Employ Risk Management and a Systems Approach
  - Risk included in analyses and in report
- Leverage Knowledge
  - All stakeholders, interest groups and agencies engaged to develop an environmentally sustainable project
- Transparent Process
  - Public/agency input solicited throughout process
RISK AND UNCERTAINTY

- Engineering Data and Models
  - Relative sea-level rise
  - Shoaling
  - Hydrodynamics and storm surge

- Economic Data and Analysis – HarborSym Model
  - Built-in risk and uncertainty with use of Monte Carlo system
  - Economic sensitivities of assumptions and inputs
    - Growth rates
    - Fleet distribution
    - Thruster removal cost

- Project Cost and Schedule Risk Analysis through Cost MCX

11/24/2014
### MEAN LOWER LOW WATER CONVERSION

- Datum recently converted from Mean Low Tide (MLT) to Mean Lower Low Water (MLLW) for consistency with other USACE Districts.
- MLLW datum used for all quantity calculations during plan formulation.
- For BIH conversion, on average, MLT/MLLW difference is +0.31 foot.
- Because dredges are incapable of such dredging accuracy, it would have no effect on dredging quantities.
- Study addresses MLT as equal to MLLW.

### STRATEGIC CAMPAIGN PLAN

**GOAL 2: Transform Civil Works**

*Deliver enduring and essential water resource solutions, utilizing effective transformation strategies.*

- Direct and indirect effects on the environment avoided by changes in project design.
- Dredged material placement plans analyzed to beneficially use material by placement in Feeder Berm.
- Developed plans over long-term, 50-year period of analysis.
- Risk analyses conducted throughout study.
- Independent review of project documents and analyses performed internally and externally.
SUMMARY OF RECOMMENDED PLAN

- Channel deepening to 52 feet MLLW
- No change for existing channel widths
- No environmental mitigation required
- Total project first cost of $252.0 M
- BCR 6.4 to 1 at 3.5% (Public Law 109-13 Section 6009)
  - Total net annual benefits of $76.6 M
- BCR 1.5 to 1 at 3.5%
  - Total net annual benefits of $6.4 M

RECOMMENDATION

Recommend the Civil Works Review Board approve the release of the Brazos Island Harbor Integrated Feasibility Report and Environmental Assessment for State and Agency Review
FUTURE TIMELINE

CWRB APPROVAL  
June 2014

30 DAY STATE & AGENCY REVIEW  
June to August 2014

SIGNED CHIEF OF ENGINEER’S REPORT  
September 2014

SUMMITED TO ASA (CW) FOR REVIEW  
September 2014

PRE-CONSTRUCTION ENGINEERING & DESIGN  
**October 2018 to October 2020**

CONSTRUCTION  
October 2020 to September 2024

** According to budget guidance PED cannot be initiated until the project is authorized
** Passing of the next WRDA is assumed to be in 2016
** Earliest we can budget for is FY 2018

QUESTIONS?
Good morning. Major General Peabody, members of the Civil Works Review Board, Col. Muraski, Col. Pannell and staffs, please let me express our appreciation for the opportunity to participate in this meeting and present on behalf of the Port of Brownsville. With me today is Mr. Ralph Cowen, Chairman of the Board of the Brownsville Navigation District Board of Canal Commissioners, Mr. Ariel Chavez, Director of Engineering Services for the Port of Brownsville, and Mr. Glenn LeMunyon, Consultant to the Port of Brownsville.
The Brownsville Navigation District will strive to be recognized for excellence in stewardship, earning strong public confidence in sound and responsive operations.

By 2015, the Port will have created more quality JOBS, attracted more PRIVATE AND PUBLIC INVESTMENT, INCREASING PORT CAPACITY, PROTECTING THE ENVIRONMENT, and promoting the common good through the strategic economic development of the Port of Brownsville.

The proposed project is vital to achieving our vision!

The origins of the Port of Brownsville can be traced back to December 22, 1928, when the citizens of our area overwhelmingly voted to establish the Brownsville Navigation District and solidly endorsed the idea of a port near the City of Brownsville. With support from the local community, the Board of United States Army Engineers and Congress, the Port was built and opened in May 1936. In the ceremonies that preceded the opening of the Port of Brownsville, President Franklin Roosevelt sent a letter with hearty congratulations to the citizens of Brownsville in which he penned “This, it seems to me, is an event of outstanding importance in the life of the community and one which will have a great influence in the future development of the city and the territory which it serves.” With that vision of the future, the Port has been guided by the vision of creating quality jobs, attracting private and public investment, increasing port capacity and protecting the environment.

The Brazos Island Harbor Channel Improvement Project is vital to achieving our vision!
The Port of Brownsville is strategically located as the only deepwater seaport directly on the US/Mexico border. We are the largest land-owning public port authority in the country with approximately 40,000 acres of land. We actively support our countries energy interest and we are home to the largest domestic fabricator of off shore drilling platforms. The Port of Brownsville is recognized worldwide as the premiere port in the United States for Shipbreaking supporting both the US Navy’s and the Maritime Administration’s objective of safely and responsibly disposing of the obsolete vessel fleet.
Ranked No. 1 in the nation and No. 1 in Texas for export activities
Ranked No. 11 out of 174 active FTZs in 2012
Exported commodities valued at over $3 billion

Top three commodities: Offshore Exploration and Production Platforms, Petroleum Products, and Steel

We support President Obama’s National Export Initiative and earlier this year; our Foreign Trade Zone No. 62 was recognized for being ranked No. 1 in the country for value of exported commodities.
The Port of Brownsville clearly has the critical attributes to be the port of the future. It is geographically positioned in an area that will see long term domestic and international economic growth. Energy production in the Gulf of Mexico and the shale play will continue to fuel a renaissance in manufacturing and industrial development in the United States while at the same time establishing our energy independence from the rest of the world.
It also reinforces the bonds with our critical trading partners to the north and south of our borders. We continue to develop the transportation infrastructure necessary to provide a system of multimodal services that offer shippers many options for receipt and delivery of cargo worldwide. While many ports continue to grow and face the challenges of congestion and urban encroachment, the Port of Brownsville has the land mass necessary to sustain its growth well into the future.
Most, if not all ports, point to the fact that they are major employment centers. They share a common objective of working to create quality jobs. The Port of Brownsville is no different. However, we approach our objective with a tremendous sense of urgency. We are located in Cameron County, one of the poorest regions of the country. We have the dubious distinction of being ranked the poorest county in the United States with the highest poverty rate. Our neighboring county to the west, Hidalgo County, is ranked number two. The per capita income for the Brownsville area is almost half that of the national per capita income.
The Port of Brownsville embraces its challenge of working diligently to create jobs that pay a living wage, of attracting industry and becoming a major economic engine.

How does the Port of Brownsville become a major economic engine? We do so by sustaining and supporting the expansion of our existing businesses.
Keppel AmFELS has called the Port of Brownsville home for over twenty (20) years. They are the largest full-service offshore manufacturing facility on the Gulf coast. What distinguishes Keppel AmFELS from other similar facilities is that they don’t specialize in any one particular aspect of offshore rig manufacturing. They can produce a rig for a customer from design to delivery; they can repair or modify a rig; and they are a shipyard that can fabricate and repair vessels. Keppel AmFELS is the largest fabricator of new rigs in the United States having fabricated 14 rigs from 2001 – 2010. From 2011 to the present, they have completed four (4) more rigs and currently have two (2) rigs under construction. At full production, Keppel AmFELS supports 3,500 jobs!
The Port of Brownsville is the leader in Shipbreaking in the United States. These Shipbreakers provide a vital service to the nation’s interest of safely and responsibly disposing of the obsolete vessel fleet. They produce scrap steel that is sold and exported worldwide. This industry contributes up to 1,200 jobs, and dismantling of the USS Forrestal has created 200 new additional jobs!
Importing and exporting cargo such as steel, scrap, limestone, ores, project cargo or other breakbulk supports a whole host of terminal, stevedoring and transportation services.
Couple these services with the liquid terminal operations and other liquid bulk cargo and we have another 1,300 jobs. Lastly, if we include the roughly 1,100 jobs associated with the fishing and real estate tenants located at the Port of Brownsville, you quickly realize how critical it is to support and address the long term sustainability of these employers. The Brazos Island Harbor Channel Improvement Project is the most important thing we can do to support this effort.
The Port of Brownsville has incredible potential. Beyond helping to grow our existing businesses, there are significant new opportunities that will benefit from the deeper ship channel. The United States is in an energy revolution due to the Shale Play as a result of hydraulic fracking. We have become a major producer of natural gas and, and that fact has not been lost on the Port of Brownsville. We currently have five (5) land options for the development of LNG export terminals.

Oil and gas exploration and production is expanding in the western Gulf of Mexico. As part of President Obama’s all-of-the-above energy strategy to continue to expand safe and responsible domestic energy production, the Bureau of Ocean Energy Management will offer more than 21 million acres offshore Texas for oil and gas exploration and development in a lease sale scheduled for August 2014. The continued expansion of the western Gulf of Mexico puts the Port of Brownsville at the right place at the right time for supporting offshore oil exploration and production.
With the collaborative efforts of various entities, we are investing millions of dollars in improvements that support the multi-modal services offered at the Port of Brownsville. These improvements include road, rail and port infrastructure necessary to improve the flow of commerce in and out of our area.

The Port of Brownsville is blessed with an abundance of land available for development. We are a port in that has significant land parcels available for development, including large scale waterfront development. All 5 LNG prospects are proposed waterfront developments. We just announced an agreement with OmniTRAX, a large private railroad company, for the development of a 1,200 acres industrial park. We currently have multiple liquid terminal projects under development and we continue to pursue large scale industrial prospects.
The Port of Brownsville has been a supporter and collaborator on numerous environmental initiatives in and around the Port area. The Bahia Grande project is perhaps the most notable. It is one of the largest, if not the largest, wetland restoration projects in the United States. The Port was instrumental in the construction of the pilot channel that created the wetland, and is still actively involved in the project to construct the permanent channel. In fact, the Port of Brownsville has some mitigation credits from its participation in the Bahia Grande Wetland Restoration Project that are applicable to the Brazos Island Harbor Channel Improvement Project. However, because the channel improvement project requires no mitigation, the use of these credits will not be necessary.

Additional initiatives include a lease of approximately 4,200 acres with the US Fish & Wildlife Service for critical wildlife habitat known as the Las Lomas Preserve. We have also designated an endangered cat corridor connecting the north and south sides of the ship channel across SH 48 allowing for the safe crossing of the highway by the endangered Ocelots. Lastly, we have participated in the successful re-introduction of the Aplomado Falcon to the area. We have an agreement with the Peregrine Fund that allows for the relocation any fledglings discovered on Port land to ensure their safety.
In 2006, the City of Brownsville embarked on a series of town meetings designed to engage as much community involvement to encourage the citizens to help chart the vision for the future of Brownsville. Hundreds of citizens and thousands of hours were spent drafting the Imagine Brownsville Comprehensive Plan. This award winning plan was adopted in 2009. The Port of Brownsville along with multiple local entities has been actively engaged in this process. The deepening of the ship channel is recognized as a critical strategic project in the Imagine Brownsville Comprehensive Plan. All of the public entities including the City of Brownsville, the University of Texas at Brownsville, Texas Southmost College and the Brownsville Independent School District support the Port's efforts to deepen the ship channel.
In summary, the deepening of the Brownsville Ship Channel is critical to the sustainability of the Port and more importantly, is serves the country’s federal interest. The project reaps high benefits at a relatively low cost. The BCR is 6.4 to 1; it is environmentally sound, has no adverse comments, …
Important to the National Interest

- Land available to support Port Growth
- Project supports Major Industry and Job Growth
- Important to service National and International Energy Interests
- Strategically located in proximity of newly developed Energy Production areas
- Services Provider and Builder of Offshore Oil Rigs
- Major Cargo Movement in General Commodities.
- Leader in Steel Imports/Exports
- Leader in Shipbreaking

... supports our nation’s energy interests and creates good paying American jobs!
The project has the full support of the project sponsor, the Brownsville Navigation District, has broad community and regional support, and has strong Congressional support for the Navigational improvements.
I want to close my presentation by supporting the recommendations of Col. Pannell and his Project Delivery Team, and ask that the Civil Works Review Board affirmatively approve the release of the BIH Integrated Feasibility Report and Environmental Assessment for State and Agency Review.

I want to thank you, Major General Peabody, and the members of the Review Board, for this opportunity and look forward to your approval and release of the report. Furthermore, we look forward with great anticipation to receiving the Chief’s Report in September of this year!

Thank you again.
